Proposal Presentation
ENGR 5000

Instructions:

       Your project team should create a short Powerpoint presentation that gives the class an idea of what your project entails. It should be treated as a professional presentation, as though you are giving it in a workplace environment. The professionalism will be a part of the grade. You may discuss your presentation with me prior to it being due.

The required information is shown below:

Sections/Information:
- Team introduction - Names and majors of each person.
- Motivate the problem - Why is your project needed in the world?
- Propose your solution – Explain from a high and detailed level. What have you finished so far? What data do you have? What options have you explored?
- Proof of concept – What is the necessary step (or steps) that will prove it could work?
- Next steps – Where are you at now? What comes next?
- Continued Learning/training – Describe any skills or knowledge that your team had to gain this semester. How did you get that training/knowledge/skill?
- Budget/Timeline – VERY briefly describe the intended project budget and timeline (less than 30 seconds).
  If possible, roll the budget/timeline throughout. On each slide with a picture, say when it was done and what it cost…makes it smoother than "Here is a slide on our budget and timeline"

Submit the final draft of the slides on Blackboard by the posted due date.
